

Jack S Veasey

Gameplay & Systems Programmer

Welwyn Garden City, Hertfordshire · 07960 211813 · jackv1@live.co.uk · Portfolio: www.jack-s-veasey.co.uk

PROFILE

Gameplay and systems programmer with a BSc (Hons) in Computer Games Development (2:1) and over seven years of professional software development. In my current role I build and maintain Java web applications on AWS for financial-market clients, diagnosing concurrency bugs, connection leaks and performance bottlenecks in large production codebases. Outside work I build games in Unity (C#) and Unreal Engine 5 (C++), including gameplay programming for a team fan project and solo and team game-jam entries. Looking for a junior gameplay or systems programmer role.

KEY SKILLS

Game development: Unity (C#), Unreal Engine 5 (C++, Blueprints); player movement and controls, enemy AI (behaviour trees), multiplayer networking, grid pathfinding, procedural generation, save/load, UI

Languages: C#, C/C++, Java, Python, JavaScript, SQL, PHP

Software & web: Spring Boot, React, Angular, HTML/CSS, Apache Tomcat, MySQL

Tools & platforms: Git, Visual Studio, IntelliJ, Eclipse, Blender, AWS, Cloudflare

EXPERIENCE

Software Developer & DevOps | 3di Innovations, London Jul 2019 – Present

Global market-data consultancy serving investment banks, brokerages, asset managers and insurers.

- Develop and maintain Java/JSP web applications (Apache Tomcat, MySQL) hosted on AWS, used by clients to profile and publish market-data information.
- Contribute to the rewrite of a legacy JSP platform as a Spring Boot and React application.
- Diagnosed and fixed production issues including thread-safety bugs in session handling, database connection leaks behind failing PDF exports, a JVM-wide lock bottleneck and N+1 query patterns.
- Write SQL reports and cross-reference data across databases for client usage and publishing analysis.
- Reduced AWS CloudWatch monitoring costs by cutting custom-metric cardinality across production accounts.
- Set up Cloudflare-based bot monitoring and blocking for a production site under heavy weekly bot traffic.
- Write and maintain technical documentation.

Gameplay Programmer (part-time, volunteer) | Armada Studios 2019 – Present

Tails Adventure Armada: a free, non-commercial 3D platformer fan project; originally built in Unity (C#), now developed in Unreal Engine 5 (C++).

- Implemented player movement and jumping, the flight system and animation synchronisation.
- Now developing gameplay systems in C++ following the project's move to Unreal Engine 5.
- Built enemy detection and combat interactions as part of a distributed volunteer team.

Earlier roles 2011 – 2017

- **Junior Administrator, 3di Innovations (Jun – Sep 2017):** built the company intranet site and maintained client and economic data.
- **Click & Collect Assistant, Toys R Us Stevenage (Oct – Nov 2015):** order fulfilment, stock replenishment and customer service.
- **Work experience, 3di Innovations (Apr 2011):** tested a new website and reported broken links and defects to the developers.

GAME PROJECTS

Lights Out | GMTK Game Jam 2026, solo, 4 days Unity (C#)

- Space strategy-sim: fly one ship between planets gathering food, materials and passengers before the star explodes; ship upgrades, a planet-panic system with soldier/mediator choices, and a colour-shifting countdown. [Play on itch.io](https://itch.io)

GearShift | Metroidvania Month 29, sole programmer (team of 2) Unity (C#)

- 2D Metroidvania built around switching between two forms: a strength form (grapple hook, rock smashing) and a traversal form (double and wall jump). [Play on itch.io](https://itch.io)

Transversi | Metroidvania Month 23, programmer (team of 7) Unity (C#)

- Metroidvania built around a character-swap mechanic; jam feedback praised the character controller. [Play on itch.io](https://itch.io)

- Toy Breakers** | University group project (team of 5) Unity (C#)
- Four-player vehicle battle game with AI or human players. Built the loading system, power-ups, match settings, character select and victory screen. [Play on itch.io](https://itch.io)
- Platformer Dissertation** | Final-year individual project Unity (C#)
- One platformer playable in 2D side-scrolling, 2.5D top-down and 3D first-person, used to research player preference; covered camera systems and per-perspective controls.

EDUCATION & TRAINING

BSc (Hons) Computer Games Development, 2:1 | University of Northampton 2019

A Level / BTEC Level 3 in IT, Distinction in all nine units | Oaklands College, Welwyn Garden City
Including Computer Systems, Information Systems, Web Production, IT Technical Support and Digital Graphics.

10 GCSEs (A–C), including Maths, English and Physics | Monks Walk School

Online courses (Udemy, with certificates)

- Ultimate Survival Horror Course, Unreal Engine 5: inventory, hiding, behaviour-tree AI (2025)
- Learn to Create a Metroidvania Game using Unity & C# (2024)
- Learn to Program & Model Procedural Cities in Unity/Blender (2024)
- Unity Turn-Based Strategy Game: Intermediate C# Coding (2024)
- Learn To Create a Tower Defence Game With Unity & C# (2023)
- Create Stunning Vertical Shoot 'Em Up for Mobile with Unity (2023)
- Building an Unreal RTS Game: The Basics

ACHIEVEMENTS & INTERESTS

- Black belt (1st Dan) in Qi Kwan Do, earned through four years of weekly training.
- School chess trophy; Award for Outstanding Attitude to Learning (Key Stage 4).
- Full UK driving licence.
- Interests: story-driven games and world-building, drawing, writing stories and chess.
